

Установить у себя в окружении AWX, создать там проекты со своими плейбуками и ролями, запустить их.

В качестве результата нужно сделать скриншоты кода и результатов запуска.

The top screenshot shows the AWX web interface. The left sidebar contains navigation links: Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration (Credential Types, Notifications, Management Jobs, Instance Groups). The main content area is titled 'Access' and shows a table of users. The table has columns for Username, First Name, and User Roles. Two users are listed: 'admin' and 'Serov', both with the role 'System Administrator'. The bottom screenshot shows the AWX web interface. The left sidebar is the same as the top screenshot. The main content area is titled 'Output' and shows the execution log of a job named 'Project#2\_git'. The log shows the following steps: 1. PLAY [Update source tree if necessary] 22:41:56. 2. TASK [update project using git] 22:41:56. 3. changed: [localhost]. 4. TASK [Set the git repository version] 22:42:01. 5. ok: [localhost]. 6. TASK [Repository Version] 22:42:02. 7. ok: [localhost] => { "msg": "Repository Version 2edd0b27c2617f47f91ecb586850d641372584ec" }. 8. PLAY [Install content with ansible-galaxy command if necessary] 22:42:02. 9. TASK [detect roles/requirements.(yaml/yaml)] 22:42:02. 10. skipping: [localhost] => (item={'ext': '.yaml'}). 11. skipping: [localhost] => (item={'ext': '.yaml'}). 12. TASK [fetch galaxy roles from requirements.(yaml/yaml)] 22:42:03. 13. skipping: [localhost] => (item={'changed': False, 'skipped': True, 'skip\_reason': 'Conditional result was False', 'item': {'ext': '.yaml'}, 'ansible\_loop\_var': 'item'}). 14. skipping: [localhost] => (item={'changed': False, 'skipped': True, 'skip\_reason': 'Conditional result was False', 'item': {'ext': '.yaml'}, 'ansible\_loop\_var': 'item'}). 15. TASK [detect collections/requirements.(yaml/yaml)] 22:42:04. 16. skipping: [localhost] => (item={'ext': '.yaml'}).
